

Semiconductor Reliability Where You Need It Most!

Fuji Electric offers a variety of semiconductor solutions optimized for UPS applications.

3-Level Modules

IGBT Modules

View More

Your UPS prevents system shutdown during power outages by relying on IGBT modules. Our IGBT modules offer the right characteristics to keep everything up and running.

High Reliability

Achieves continuous operation at 175°C through chip optimization and heat resistance of package to minimize field failures.

High Efficiency

Thinning the thickness and miniaturizing the structure of the IGBT chip and diode chip reduces power losses during inverter operation.
